DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-9,12,14,15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sutton 4,788,893 in view of Thomas et al 5,337,632.

Both Sutton and Thomas et al teach a door opening angled device made of metal or plastic and having a hole at one end for a key ring or chain to be attached thereto. It is noted that the method and functional limitations regarding the use of the device on a frozen door are merely considered to be intended use of the device and are not accorded patentable weight. Specifically, Sutton teaches an angled device having substantially equal parts and having an angle therebetween of 45 degrees. Thomas et al teach an angled device having a constant width. It would have been obvious to one of ordinary skill in the art, given the teaching of Sutton in col.2, lines 60-64, to provide a constant width to the Sutton device as taught by Thomas et al as an obvious matter of design choice in enhancing the strength of the prying device.

Response to Arguments

3. Applicant's arguments with respect to claims 1-9,12,14,15 have been considered but are moot in view of the new ground(s) of rejection.

In response to Applicant's amendments, the teachings of the previously alternately applied references are now combined to reject the claims as set forth above. It is noted that the instant drawings do not show equal lengths to the two angled parts, therefore, the substantially equal lengths of the Sutton device are deemed to anticipate the claimed invention. Furthermore, Sutton clearly teaches the 45 degree angle between the parts and therefor, the claimed range between 45-85 degrees is also taught. In addition, the constant width now claimed is clearly taught by Thomas et al as discussed above. It is reiterated that the method or functional limitations defining the intended use of the device are not accorded patentable weight. Accordingly, claims 1-9,12,14,15 stand rejected.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
